To put the gate rack together, lay one vertical end of the rack horizontally and block it up to give clearance to tighten the nuts.

1. Begin by attaching the bottom horizontal support to the vertical that has three holes on one end. (DETAIL 1A) Use the $\frac{1}{2}$ " x $1\frac{1}{2}$ " hex head bolts. Tighten with the $\frac{1}{2}$ " nuts.

2. Attach the middle and top horizontal supports to the vertical as shown in DETAIL 1B using the $\frac{1}{2}$ " x $1\frac{1}{2}$ " bolts and $\frac{1}{2}$ " nuts. Tighten securely in place.
3. Connect the other vertical support to the subassembly that was created. Use the same process to complete the gate rack.
4. Set the rack up in the upright position. This will take two people to put it on end.

WARNING: Do NOT leave this rack empty. The weight of the product keeps the rack sturdy and secure.
